Profile

Frontend Developer focused on responsive, accessible and performant web interfaces. Develops hands-on projects using React, Next.js, TypeScript and AI-assisted workflows. Enjoys translating designs into clear, usable interfaces and is seeking an opportunity to contribute to a professional development team.

Technical skills

Frontend HTML, CSS, JavaScript, React, Next.js, TypeScript, Tailwind CSS

Tools and workflow Git, GitHub, Figma, Codex, AI-assisted coding and debugging

Selected projects

ATLAS Ops

React, TypeScript, Vite, Recharts | View demo

- Developed an operations dashboard with editable tasks, Kanban status controls, charts, coverage scheduling and browser persistence.
- Integrated a live GitHub issue queue with validated responses, cancellable requests, loading, error and empty states, and duplicate-safe import into local tasks.

NOVA OS

Next.js, React, TypeScript, Tailwind CSS | View demo

- Developed a connected workspace for projects, tasks and editable automation flows using shared typed data and browser persistence.
- Integrated live GitHub milestones with validated responses and duplicate-safe local imports. The assistant uses deterministic rules; authentication is simulated.

NILA Ledger

React, TypeScript, Vite, Recharts | View demo

- Developed transaction management, category and date filters, adjustable budgets, spending charts and monthly reports.
- Used integer pennies for monetary calculations; added filtered CSV downloads and printable reports. Records use local demonstration data.

Built a personal portfolio and three brand concepts covering hospitality enquiries, a persistent shopping bag and an interactive travel globe.

Development approach and availability

Personal concept projects developed with AI-assisted coding. Core journeys are checked with Playwright at desktop and mobile sizes.

Open to remote frontend roles and relocation for the right opportunity.
